

Dario Pompeu de Camargo Neto

Backend Software Engineer | Applied AI Engineer | Go · Java · Distributed Systems

São Paulo, Brazil · +55 11 99208-0969 · dpcamargo@gmail.com · linkedin.com/in/dpcamargo · dario.dev.br

Summary

Backend Software Engineer with 4+ years building production systems in Go, Java, and Python: REST microservices, distributed architectures, and LLM agent orchestration tooling. Preceded by ~12 years in industrial automation and real-time systems. Currently at Mercado Livre, building high-availability, low-latency microservices for its food-delivery business.

Skills

Programming: Go, Java, Python

Backend & Architecture: REST APIs, gRPC, GraphQL, Spring Boot, microservices, distributed systems, event-driven / asynchronous processing, Clean Architecture, Hexagonal Architecture (Ports & Adapters), Domain-Driven Design (DDD)

Data & Messaging: SQL and NoSQL databases, caching, message queues

Cloud & Infrastructure: AWS, GCP, Docker, Mercado Livre's internal developer platform (Fury)

Operations & Practices: Datadog, observability, performance troubleshooting, code review, agile delivery

AI / Agentic Systems: LLM agent orchestration, multi-agent task dispatch, headless agent execution, sandboxing, structured output (JSON schema), prompt versioning, verification pipelines

Languages: Portuguese (native), English (fluent), Spanish (intermediate)

Experience

Software Engineer at Mercado Livre · Jan 2024 – Present

- Build and operate REST microservices in Go and Java for Proximity, Mercado Livre's fast-growing food-delivery business unit, designing APIs for internal platforms and external delivery partners.
- Implement asynchronous processing over message queues to decouple services and scale data handling under high-availability, low-latency requirements.
- Apply Clean Architecture and Domain-Driven Design (DDD) to the design and evolution of distributed services, improving modularity and maintainability.
- Use AI coding assistants as part of the daily engineering workflow to speed up implementation, code review, and debugging.
- Monitor production performance with Datadog on Mercado Livre's internal cloud platform (Fury), diagnosing and resolving critical bottlenecks; active in code reviews and technical design discussions.

Software Engineer at TimeNow (client: Braskem) · May 2022 – Dec 2023

- Built Python automation and monitoring tooling for critical processes at Braskem's Rio de Janeiro petrochemical plant, working directly with plant engineers to validate requirements and safety constraints.
- Implemented real-time monitoring systems, improving operational efficiency and safety.
- Developed fault-detection algorithms that reduced unplanned downtime.
- Improved data acquisition and analysis workflows under strict quality and safety standards.

Engineering Lead at Semcon (client: Mercedes-Benz) · Jan 2020 – Jul 2020

- Led the instrumentation team testing and validating Mercedes-Benz buses and trucks, delivering on schedule.
- Built Python automation and data-analysis tooling for NVH (noise, vibration, harshness) testing; reviewed supplier deliverables against technical specifications.

Senior LabVIEW Engineer at Nirax · Apr 2013 – Jan 2020

- Designed and delivered custom automation software for automotive, aerospace, and manufacturing clients, including Mercedes-Benz, Fiat, Jaguar Land Rover, and Embraer, owning architecture and the full project lifecycle.
- Built real-time embedded systems and computer-vision applications for industrial automation.
- Managed scope, deadlines and stakeholder communication directly with clients.

Education

- Postgraduate Specialization, Java Architecture and Development, FIAP · 2026
- Postgraduate Specialization, Advanced Go Development, Full Cycle · 2024
- B.Eng. in Control and Automation Engineering, Paulista University (UNIP) · 2018
